

Copy the env variables into the Yocto Build. Click on Add and type in the Variable then click the Value and (possibly Edit, too) then put in the value.

These are the values for copy/paste

QT_QPA_EGLFS_ALWAYS_SET_MODE	1
QT_QPA_EGLFS_KMS_ATOMIC	1
QT_QPA_EGLFS_KMS_CONFIG	/usr/share/qt5/cursor.json
QT_QPA_EGLFS_NO_LIBINPUT	1
QT_QPA_EGLFS_TSLIB	1
QT_QPA_FB_DISABLE_INPUT	1
QT_QPA_PLATFORM	eglfs
TSLIB_TSDEVICE	/dev/input/event0

Now, there is a shortcut. In each project there is a pro.user file that can be *\*carefully\** edited and you can search for each of two sections and replace them *\*carefully\** with

```
<valuelist type="QVariantList" key="ProjectExplorer.BuildConfiguration.UserEnvironmentChanges">  
<value type="QString">QT_QPA_EGLFS_KMS_ATOMIC=1</value>  
<value type="QString">QT_QPA_EGLFS_KMS_CONFIG=/usr/share/qt5/cursor.json</value>  
<value type="QString">QT_QPA_PLATFORM=eglfs</value>  
<value type="QString">TSLIB_TSDEVICE=/dev/input/event0</value>  
<value type="QString">QT_QPA_EGLFS_ALWAYS_SET_MODE=1</value>  
</valuelist>
```

And --

```
<value type="int" key="PE.EnvironmentAspect.Base">1</value>  
<valuelist type="QVariantList" key="PE.EnvironmentAspect.Changes">  
<value type="QString">QT_QPA_FB_DISABLE_INPUT=1</value>  
<value type="QString">QT_QPA_EGLFS_NO_LIBINPUT=1</value>  
<value type="QString">QT_QPA_EGLFS_TSLIB=1</value>  
<value type="QString">QT_QPA_EGLFS_KMS_ATOMIC=1</value>  
<value type="QString">QT_QPA_EGLFS_ALWAYS_SET_MODE=1</value>  
</valuelist>
```

Then do the same in the Run section. This section must be done for each project. They don't copy.
