

June 2, 2023

PCN 000043.1 is an update to PCN 000043 issued in February 2023.

The Ampire 5.7" QVGA Display used in the Production Module you purchase from us has reached End of Life status.

Our engineering team has identified a form, fit, and function replacement. The differences are a higher contrast ratio (1000 vs. 350) which means deeper blacks and, by extension, better picture quality and a wider viewing angle (80/80 left/right, 80/80 up/down vs. 80/50 left/right, 60/60 up/down). Please let us know if you require a first article to confirm your acceptance of the new part. See the [new panel specification](#).

Description of Change: Due to reasons outside of our control, production of the Ampire 5.7" LCD has reached End of Life.

PCN Effective Date and Last Time Buy Date: This PCN is effective immediately. The last time buy for this display is no longer available. Current orders will be fulfilled with the new displays.

Next Steps: Once first articles are approved, we can schedule your first production delivery.

Please refer to the suggestions below, or consult with me, or your Key Account Manager.

Sincerely,

Bhaskar Ramakrishnan
